

Dr. Alan McCabe has been passionate about technology for as long as he can remember. His journey began by teaching himself to program in BASIC while spending time in the back room of his parents' small business—an early curiosity that would grow into a lifelong career in innovation.

After studying Computer Science at university, Alan completed a PhD in Artificial Intelligence while also lecturing in programming, databases, and AI, laying a strong academic foundation before moving into the technology industry.

Over the course of his career, Alan has worked across the fintech sector, developing banking software, internet banking platforms, payment switching technologies, and workforce management and payroll solutions. His contributions to technology have earned industry recognition, including being named **Queensland Young Entrepreneur of the Year**, while his independent AI projects—including biometric authentication and sports prediction technology—have been featured in mainstream media across more than 80 countries and translated into over a dozen languages.

Alan joined Roubler in 2016, at a pivotal stage in the company's growth. As Chief Technology Officer, he helped define the organisation's technology strategy from the ground up, leading the redevelopment of the platform and supporting its successful launch across three countries within just nine months alongside a talented and dedicated team.

Today, Alan is excited to help lead the next chapter of innovation as part of **Roubler International**.

"I feel like Roubler International is the new spiritual home of Roubler as we begin this exciting new chapter. I'm incredibly honoured to be part of the journey and look forward to helping shape the future of our platform for customers around the world."
